SUMMARY

Product operations analyst at a healthtech platform with experience owning features from launch through iteration, partnering with product and engineering on roadmap decisions, and using SQL to find and size growth opportunities. Builds AI agents with Claude, Gemini, and N8N to automate catalog, research, and data quality work at scale.

EXPERIENCE

Parachute Health | Remote

Senior Product Operations Analyst, Category — *April 2026 – Present*

- Own the Prescription Quantity feature past its initial rollout, driving adoption across the highest-volume clinical ordering workflows, cutting ordering errors by 30%, and leading feedback, edge case triage, and iteration.
- Partner with product and engineering leadership on roadmap planning, including pharmacy benefit criteria support and future Prescription Quantity rollouts to new product categories, translating clinical workflow insights into build decisions.
- Built a Claude-powered skill that audited 20,000 catalog SKUs against manufacturer sources, surfacing and fixing hundreds of accuracy and searchability errors that would be impractical to catch manually.
- Own the Diabetes product catalog ($8M in platform revenue), maintaining catalog accuracy and SKU coverage across supplier offerings so healthcare facilities can fulfill patient orders through the platform.

Product Operations Analyst, Category — *October 2024 – March 2026*

- Co-owned category growth strategy driving 25% order growth in legacy categories and 122% in new ones, using SQL to find recurring orders still sent by fax and restructuring catalog and coverage criteria to capture them.
- Helped launch the Prescription Quantity calculator, working with engineering and product to translate clinical ordering workflows into product requirements and edge case logic that improved ordering accuracy.
- Built AI agents with Claude, Gemini, and N8N, including a Claude agent that standardized legacy product attribute values (saving an estimated 4 weeks of manual work) and a weekly Diabetes industry briefing.
- Shipped and maintained YAML-based coverage criteria surveys, updating clinical qualification logic as Medicare and payer requirements changed to keep content compliant and current.

Global Industrial | Port Washington, NY

Product Operations Specialist — *March 2024 – October 2024*

- Kept pricing, attribute, and vendor data accurate across a large product portfolio to support site search.
- Coordinated cross-functional product operations work across marketing, sales, and category teams, including content updates, vendor pricing changes, and go-to-market launches.
- Analyzed pricing, product performance, and inventory data to surface insights that informed category decisions and improved competitiveness in key categories.
- Built product performance dashboards and project documentation to track key metrics across stakeholders.

Global Industrial | Port Washington, NY

Product Management Intern — *June 2022 – August 2022*

- Integrated 3,000+ new products onto the company website by coordinating with 20+ vendors.
- Optimized product listing quality by standardizing 1,500+ item descriptions, improving search relevance and conversion rates.

SKILLS

Tools: Excel, SQL, Tableau, Looker, Jira, Zendesk, Notion, PowerPoint

AI & Automation: Claude, Gemini, N8N, AI agent building, prompt engineering, workflow automation

Product: Feature launches, requirements gathering, roadmap planning, feedback triage, data analysis, cross-functional leadership

Healthcare: DME/HME, clinical ordering workflows, Medicare and payer coverage criteria

EDUCATION

University of Delaware | Newark, DE

Bachelor of Science, Operations Management

Minor in Management Information Systems
